Putting people first For us this means providing customised diagnostic and wound treatment with a carefully designed product range. We take into account patients' needs and all accompanying factors, with the aim of ensuring efficient and successful diagnostic & therapy. The use of effective products to promote an ideal moist wound environment is crucial in achieving this objective.

This multidisciplinary task entails not only medical and nursing challenges, but also the requirement to achieve cost efficiency. Selecting effective products helps to reduce treatment times and make cost savings, ultimately contributing to an improved quality of life for patients and their families.

You can have complete confidence in our high quality standards when making your choice of products. TRIGOCare International GmbH offers an advanced, phase-oriented range to provide you with reliable support at every stage of wound treatment. Our products are combinable and cover a wide range of applications.

TRIGO PHMB

NEW!

sterile, moist wound dressing with polyhexanide (PHMB)
antimicrobial complex

TRIGO PHMB is a sterile, moist wound dressing with polyhexanide (PHMB) antimicrobial complex. This solution decontaminates and serves as a prophylaxis against infection with micro-organisms. It also provides prophylaxis against bacterial and fungal pathogens in both acute and chronic wounds. The effective combination of TRIGO PHMB's ingredients dissolves the biofilm, cleans the wound and creates the ideal wound climate for the formation of new granulation tissue. TRIGO PHMB has to be fixed with a proper secondary dressing.

Advantages of TRIGO PHMB:

- antimicrobial complex
- decontaminates and serves as a prophylaxis against infection with micro-organisms
- provides prophylaxis against bacterial and fungal pathogens in both acute and chronic wounds
- dissolves the biofilm
- prevents from multiplying of bacteria

Indications:

acute and chronic wounds at risk of infection:

- post-operative wounds
- abrasions
- up to 2nd degree burns
- Ulcus cruris of different origin
- Diabetic Foot Ulcers
(Wagner-Armstrong-Classification grade 1)
- Decubitus up to grade 3
- split-skin grafts

Contraindications:

- with hypersensitivity to one of the ingredients
- wounds extending into muscles, bones and tendons

TRIGOGel

sterile , amorphous hydrogel

Advantages of TRIGOGel:

- very high moisture donation with simultaneous absorption of exudates and cell debris
- long dispensing cannula for ease of administration
- ideal moist wound environment
- does not adhere to the wound

Indications:

- Ulcus cruris of different origins
- necrotic, low exuding and dry wounds of various origin
- Decubitus up to grade 3
- up to 2nd degree burns

Contraindications:

- infected wounds
- 3rd degree burns
- heavily exuding wounds
- wounds extending into muscles, bones and tendons

TRIGOGel is a clear, viscous, sterile gel that contains a modified starch polymer, glycerol, preservatives and water. TRIGOGel maintains a moist wound environment, that enhances the physiological healing process. Dependant on wound conditions, TRIGOGel rehydrates dry necrotic tissue to promote debridement in dry wounds or absorbs wound slough and exudates of low exuding wounds.

TRIGOGel can be easily and gently removed by means of an appropriate wound cleaning with e.g. a sterile 0.9% saline solution or a sterile Ringer’s rinsing solution. This produces little or no trauma to the wound and so results in improved wound healing and pain-free dressing changes. TRIGOGel is always used in combination with a secondary dressing.

TRIGOpad aqua

transparent hydrogel dressing

Advantages of TRIGOpad aqua:

- releases moisture to the wound with simultaneous absorption of exudates and cell debris
- does not adhere to the wound
- atraumatic dressing change
- ideal moist wound environment
- bacteria- and moisture-repellent, but gas-permeable

Indications:

- superficial wounds
- up to 2nd degree burns
- split-skin grafts
- Ulcus cruris of different origin
- Decubitus up to grade 3

Contraindications:

- infected wounds
- 3rd degree burns
- heavily exuding wounds
- wounds extending into muscles, bones and tendons

TRIGOpad aqua is a slightly cooling, transparent hydrogel dressing made of a PU-gel (60% water) with a gas-permeable, but liquid- and bacteria-impermeable surface layer of polyurethane. The gel can release humidity and absorb secretion at the same time. Thereby it provides a moist wound environment which promotes the natural healing process. TRIGOpad aqua does not stick to the wound and can be removed residue-free. The dressing is transparent and thereby allows an easy observation of the wound without bandage changes.

TRIGOsorb / TRIGOsorb Tamponade

wound dressing or tamponade with calcium-alginate

TRIGOsorb wound dressing and tamponade are very conformable, sterile and high absorbing primary dressings made of calcium alginate and hydrocolloid. The alginate/ hydrocolloid fibres react with wound exudate to form a soft gel. This gel provides a moist wound environment, conducive to healing. TRIGOsorb absorbs wound exudate in the fibres and avoids leaking of the secondary dressing. For the dressing change gel residues inside the wound can be removed by gently rinsing out with 0,9% saline solution. This allows an atraumatic and pain-free dressing change.

TRIGOsorb has to be combined with an adequate secondary dressing.

Advantages of TRIGOsorb:

- high absorption capacity
- robust, can be removed in one piece
- does not adhere to the wound
- provides atraumatic dressing change by gel formation
- ideal moist wound environment

Indications:

- Ulcus cruris of different origin
- Decubitus up to grade 3
- heavily exuding wounds of different origin
- up to 2nd degree burns
- split-skin grafts

Contraindications:

- surgical implantations
- 3rd degree burns
- dry or necrotic wounds
- wounds extending into muscles, bones and tendons

TRIGOfoam / TRIGOfoam adhesive

sterile foam dressing, non-adherent / with adhesive border

TRIGOfoam is a sterile, semi-permeable foam dressing with high absorption capacity. It maintains a moist environment to enhance the natural healing process and can be removed without residues. TRIGOfoam adhesive is permeable to gas but not to liquids and bacteria. The absorbent layer transfers exudates away from the wound and captures it without leaks or meltdown. The dressing does not adhere to the wound thereby reducing any pain associated with dressing removal preventing trauma to newly formed tissue. TRIGOfoam has to be fixed with a proper secondary dressing.

TRIGOfoam adhesive is provided with an surrounding adhesive boarder so no secondary dressing is needed.

Advantages of TRIGOfoam and TRIGOfoam adhesive:

- high absorption capacity
- does not adhere to the wound
- atraumatic dressing change
- ideal moist wound environment
- bacteria- and moisture-resistant, but gas-permeable

only for TRIGOfoam adhesive:

- no secondary dressing needed due to the adhesive boarder

Indications:

- moderate to heavily exuding wounds
- up to 2nd degree burns
- split-skin grafts
- Ulcus cruris of different origin
- Decubitus up to grade 3
- Diabetic foot ulcers
- post-operative wounds

Contraindications:

- dry or necrotic wounds
- wounds extending into muscles, bones and tendons

TRIGOcolloid foam

sterile, self-adhesive hydrocolloid-foam-dressing

Advantages of TRIGOcolloid foam:

- combines the positive characteristics of a hydrocolloid with the advantages of a polyurethane foam
- self-adhesive
- atraumatic dressing change
- does not adhere to wound
- ideal moist wound environment
- bacteria- and moisture-resistant, but gas-permeable
- low macerations risk due to an excellent exudate management

Indications:

- Decubitus
- Ulcus Cruris of different origin
- Diabetic foot ulcers
- up to 2nd degree burns
- post-operative wounds
- split-skin grafts
- abrasions

Contraindications:

- 3rd degree burns
- wounds extending into muscles, bones and tendons

advice for users

wound	wound phase	exudation	product type	marking
			PD, SD	= 5 years

TRIGOcolloid foam is a sterile, self-adhesive hydrocolloid dressing with a polyurethane foam layer. The hydrocolloid layer is perforated and enables the overlaying polyurethane foam a fast absorption of the wound exudate. So the exudate is piped away from the wound without itself running dry. Thereby the risk of maceration is minimised.

The hydrocolloid matrix transforms to a soft gel by contact with wound exudate which maintains a moist wound environment especially for low exuding wounds and thereby supports a faster healing.

TRIGOcolloid foam is user friendly, facilitates the exudate management and increases the patient comfort at the same time.

Order information

item-N°	size	DU
14102	10 x 10cm	10 pcs.

TRIGOcolloid / TRIGOcolloid thin

hydrocolloid wound dressing (1mm and 0,3mm)

TRIGOcolloid and TRIGOcolloid thin are sterile, hydro active and self-adhesive wound dressings for moist wound treatment. The dressings maintain a moist wound environment, that enhances the physiological healing process. TRIGOcolloid and TRIGOcolloid thin are permeable to gas but impermeable to liquids and bacteria. By contact with wound exudate the hydrocolloid transforms into a soft gel. Thereby it does not adhere to the wound and reduces any pain associated with dressing removal preventing trauma to newly formed tissue. Both dressings are very flexible and suitable for the protection of sites exposed to rubbing and shear stress. In addition TRIGOcolloid thin allows a good observation of the wound due to its low thickness.

Contraindications:

- 3rd degree burns
- wounds extending into muscles, bones and tendons

Advantages of TRIGOcolloid und TRIGOcolloid thin:

- self-adhesive
- does not adhere to wound
- atraumatic dressing change
- ideal moist wound environment
- bacteria- and moisture-resistant, but gas-permeable

Indications:

- Decubitus
- Ulcus Cruris of different origin
- Diabetic foot ulcers
- up to 2nd degree burns
- split-skin grafts
- abrasions

TRIGOfilm / TRIGOfilm comfort

sterile, transparent wound dressing

Advantages of TRIGOfilm / TRIGOfilm comfort:

- very flexible
- waterproof, can be worn in the shower
- user-friendly applicator (TRIGOfilm comfort)
- atraumatic dressing change
- allows easy observation of the wound
- ideal moist wound environment
- can be used to protect the wound edges
- bacteria- and moisture-repellent, but gas-permeable

Indications:

- superficial wounds
- minor skin lesions e.g. abrasions
- fixation of primary wound dressings (e.g. TRIGOpad aqua, TRIGOfoam, TRIGO PHMB)
- post-operative wound treatment

Application of TRIGOfilm comfort:

remove centered protection foil from non-adhesive side

remove protection foil from the adhesive side

apply dressing to the wound

peel off the surrounding frame carefully and stroke the borders smoothly

TRIGOfilm and TRIGOfilm comfort are sterile, waterproof wound dressings coated with a skin-friendly polyacrylate adhesive. The wound dressing is transparent and thus enables the observation of the wound without dressing change. TRIGOfilm and TRIGOfilm comfort are permeable to gas exchange but impermeable to water and bacteria. They do not adhere to the wound, thereby reducing any pain associated with dressing removal preventing trauma to newly formed tissue.

The application of TRIGOfilm comfort is facilitated by an all around running, firm frame: the dressing can be positioned safely and reeling of the edges is prevented.

TRIGObreastgelpad

sterile, transparent hydrogel pad

TRIGObreastgelpad is a sterile, slightly self adherent gel pad which reduces pain caused by cracked, dry and sore nipples when breastfeeding. The gel pad is able to release moisture and absorb liquids at the same time. TRIGObreastgelpad maintains a moist wound environment to enhance the natural healing process. Due to the outer polyurethane layer TRIGObreastgelpad is permeable to gas but not to liquids and bacteria. The polyurethane gel which comes in contact with the skin has a slight cooling effect and is therefore very comfortable for the women. The dressing does not adhere to the wound and can easily be removed before breastfeeding.

Advantages of TRIGObreastgelpad:

- slight cooling effect
- does not adhere to wound
- ideal moist wound environment
- bacteria- and moisture-resistant, but gas-permeable

Indications:

- reduces pain caused by cracked and/or sore nipples
- protects sensitive nipples
- avoids direct contact with clothes
- keeps the nipple range moist and smooth and enables a faster sore healing

Contraindications:

- with cracked or bleeding nipples or fungal infections please contact your local physician
- 3rd degree burns
- heavily exuding wounds
- wounds extending into muscles, bones and tendons

TRIGOfilm pad

sterile, transparente wound dressing with silver containing wound compress

Order information

item-N°	size	DU
22001	5 x 7,2cm	100 pcs.
22002	8 x 10 cm	50 pcs.
22003	10 x 10 cm	50 pcs.

TRIGOfilm pad is a sterile, transparent dressing with an silver containing antimicrobial absorbent pad which does not adhere to the wound. The substrate is breathable and coated with skin-friendly hotmelt-adhesive.

An ideal fit is ensured even on difficult articulated areas due to its highly flexible polyurethane foil.

The water-repellent PU film protects the wound from moisture and enables the patient to shower. Thanks to the „wave-cut“ the protection foil is very easy to remove.

Indications:

- superficial wounds
- minor skin lesions e.g. abrasions
- post-operative wound treatment

TRIGOpor

sterile wound dressing with silver containing wound compress

Order information

item-N°	size	DU
21001	5 x 7,2cm	100 pcs.
21002	8 x 10 cm	50 pcs.
21003	10 x 10 cm	50 pcs.
21004	10 x 15 cm	50 pcs.

TRIGOpor is a sterile wound dressing with an silver containing antimicrobial absorbent pad which does not adhere to the wound. The substrate is a breathable non-woven polyester and coated with skin-friendly hotmelt-adhesive.

An ideal fit is ensured even on difficult articulated areas due to its highly flexible non-woven and the all around adhesive substrate. Easy and crease-free application.

Indications:

- superficial wounds
- minor skin lesions e.g. abrasions
- post-operative wound treatment
